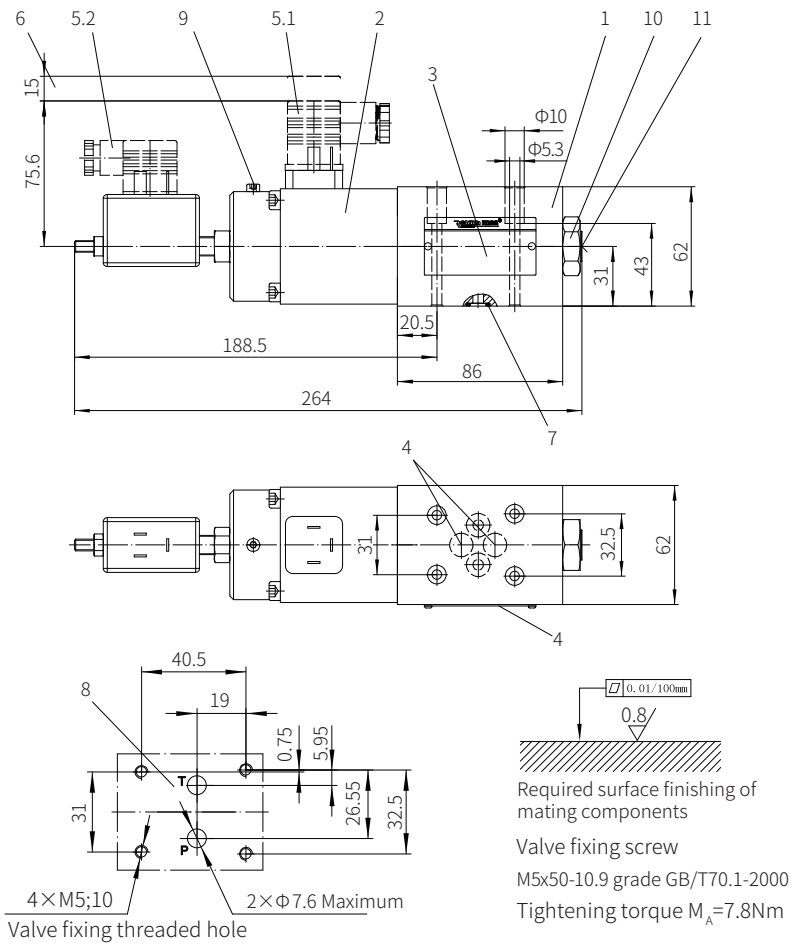
Component size

Size unit: mm



1 Valve body
2 Proportional solenoid with inductive position transducer
3 Name plate
4 Blind hole
5 Plug-in connector
6 Space required to remove the plug-in connector
7 Identical seal rings for P, T and blind hole
8 Machined valve mounting surface

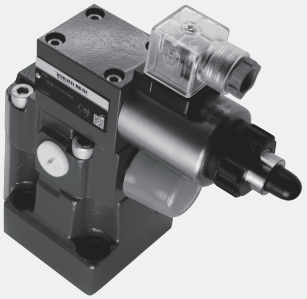
Differences from the standard:

- Locating pin not present
- A and B ports not drilled

9 Bleed screw
10 Lock nut SW27
11 Internal hexagon SW8

Pilot Operated Proportional Relief Valve

Model: DBEM/DBEME...7XJ



- Size 10/25/32
- Maximum working pressure 350 bar
- Maximum working flow 700 L/min

Contents

Features

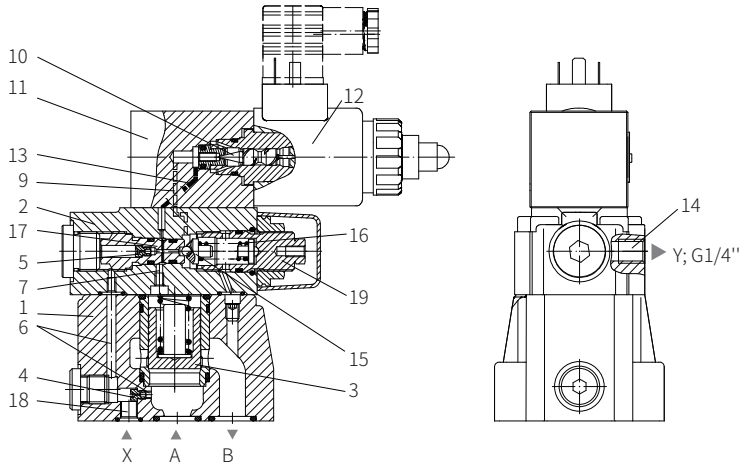
- For subplate mounting
- For installation in manifolds
- Maximum pressure limitation
- Both valves and proportional amplifiers from the same supplier

Function description, sectional drawing

The DBEM and DBEME valves are pilot operated proportional relief valves and used to limit the hydraulic system pressure. The pressure in hydraulic system can be adjusted according to the electric command value by these valves.
They basically consist of the main valve body (1) with main valve spool (3), pilot control valve (2) and the solenoid pilot valve (11).

Model DBEM
The pressure at the P port acts on the bottom of the main valve spool (3), and also acts on the spring loaded side of the main valve spool (3) by orifices (6,7) and plug-in damping (4,5). The pressure is applied to the needle valve (10) of the solenoid pilot valve (11) through the control hole (9) to counteract the output force of the proportional solenoid (12) according to the set value. If the hydraulic pressure exceeds the output force of the proportional solenoid, the needle valve (10) opens. The pilot oil flows into port Y through orifice (13) and returns to the oil tank.
Subsequently, The pressure drop is formed from orifices (6,7) and against the force of the return spring to lift the main valve spool (3). The port P is connected to port T. The main valve spool (3) controls the pressure at the P port.

An additional spring loaded pilot control valve (2) is required to limit the maximum pressure (pressure protection function). The conical valve (15) and pilot valve seat (17) are closed due to the force of the spring (16).
If the pressure in the spring chamber of the main valve spool (3) exceeds the maximum allowable setting pressure of the valve, the conical valve (15) overcomes the force of the return spring to open and connect the oil circuit to the spring chamber. The pressure oil returns to the oil tank via port Y. The pressure drop is formed from orifices (6, 7) and overcome the force of the return spring to lift the main valve spool (3). The connection from port P to port T is opened. The main valve spool (3) controls the pressure at the port P.
The pre-set pressure can be reduced by the adjusting sleeve (19) if necessary. Port Y must return to the oil tank from the external pipeline, and there is no pressure in the return pipeline layer. The valve unloads and limits the maximum pressure through port X (18).



Model DBEME10-7XJ/...XYG24K4

Function description, sectional drawing

Model DBEME
The function and design of this valve is basically the same as model DBE/DBEM except electronic controller.
The electronic control position and integrated plug amplifier (19) receive power and command values by the plug-in plug (20).

Models and specifications

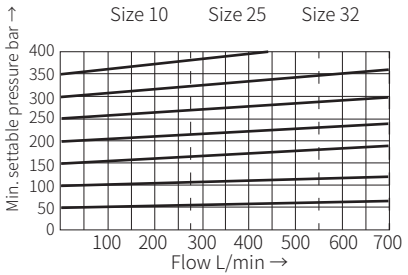
DBE | M | | | – 7X | J | / | | G24 | | / | | | *

- with maximum pressure Limitation =M
- external amplifier =No code; with integrated amplifier =E
- size: NG10 =10; NG25 =20; NG32 =30
- subplate mounting =No code; threaded connection =G
- 70 to 79 series =7X (70 to 79 series installation and connection size unchanged)
- Rekith =J
- maximum pressure stage: to 50bar =50; to 100bar =100; to 200bar =200; to 315bar =315; to 350bar =350
- Y= pilot oil supply internal and drain external; XY= pilot oil supply external and drain external
- G24= supply voltage 24 VDC
- No code= 1600mA coil; -8 800mA coil
- for model DBE(M)E: A1= command value 0 to 10 V; F1= command value 4 to 20 mA
- DBEM electrical connection: K4= square socket without plug
- DBEME electrical connection: K31S= with 1.5 meter cable and tin on the end; K31C= with M12x1 aviation plug, 5-pin
- sealing material: No code= NBR seals; V= FKM seals (consult for other seals)
- more information in text

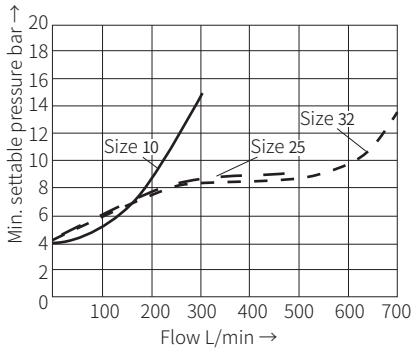
Characteristic curve

(Measured when using HLP46, ϑ_{oil}=40°C ± 5°C)

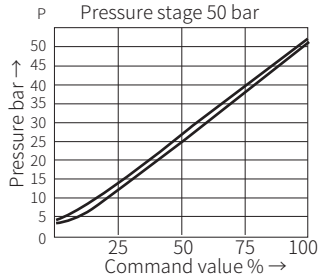
Settable pressure in relation to the flow



Minimum settable pressure at command value 0

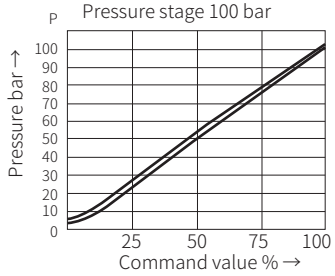


Pressure stage 50 bar

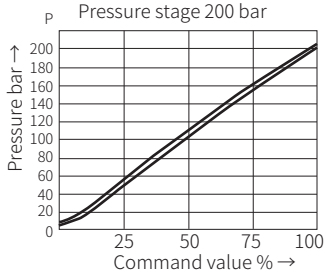


Command value pressure characteristic curve (measured at a flow rate of 24L/min)

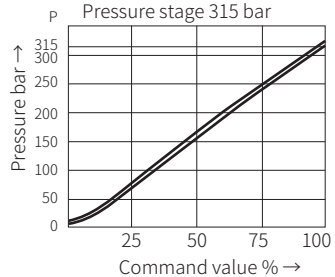
Pressure stage 100 bar



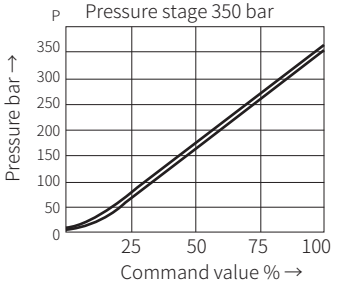
Pressure stage 200 bar



Pressure stage 315 bar



Pressure stage 350 bar



Technical parameters

(Test conditions: measured at v =40mm²/s, t=50°C)

Size				Size 10	Size 25	Size 32
